

### Green tariff rates

As notified by Green Energy Open Access Rules, 2022, green tariff comprises of the average pooled power purchase cost of the renewable energy, cross-subsidy charges, if any, and service charges covering the prudent cost of the distribution licensee for providing green energy to the consumers. These charges are over and above the demand, energy and other applicable open access charges to be paid by the consumer. State specific green tariff rates are determined by the state electricity commissions.

State	Applicability	Green tariff rate (INR/kWh)	Eligible consumer type
