

Niti Gupta is a Research Analyst with the Council on Energy, Environment and Water (CEEW) with a focus on climate risk and adaptation strategies. Her work at The Council involves the application of insights from behavioural economics for climate adaptation awareness. Her research interest lies in the field of RCTs, behavioral and experimental economics, and using evaluation studies to critically examine public policies in developing countries.

Prior to joining The Council, she was as a Research Associate with the Centre for Science and Environment (CSE), where her work involved research around the social and environmental impacts of mining and thermal power projects in India. She has also undertaken Environmental Impact Assessment and Social Impact Assessment certifications with CSE.

Niti holds a Master's degree in Development Studies, with a major in Economics of Development, from the International Institute of Social Sciences (ISS), Erasmus University. For her thesis, she independently designed and conducted a randomised controlled trial, which included a field experiment related to the applications of behavioral economics and showed its interaction with the public policy realm in India. The paper was motivated by the ambiguous large scale public acceptance of demonetization in India. The thesis was awarded one of the Best Three Research Papers of ISS MA in Development Studies, Academic Year 2016-17. She also holds an undergraduate honours degree in Economics from Daulat Ram College, Delhi University.
